

OpenClaw Cron Cheatsheet

Core commands:

- `openclaw cron list`
- `openclaw cron runs --id <jobId>`
- `openclaw cron run --id <jobId>`
- `openclaw cron remove --id <jobId>`

Typical edits (safe pattern):

- 1) list jobs and copy job id
- 2) update cadence/message/model
- 3) run job once to validate
- 4) check runs output

Your key jobs:

- AgentMail poller: `baa7b925-82c3-441a-9b25-9134a021cc80`
- Solana scout: `87a4b7db-91cc-4df1-b09c-6f3c10544ee1`

Troubleshooting:

- If runs show API quota issues, job may appear successful but with error summary.
- For missed replies, check poller logs and reply-state file.
