Multi-Agent Orchestrator Cheatsheet

Orchestrator pattern:

• One front-door agent classifies requests and delegates.

• Specialists execute in isolated sessions.

Recommended specialist set:

• sales-agent: leads, replies, follow-ups

• builder-agent: website/code/deploy

• ops-agent: infra/healthcheck/incident response

• research-agent: briefs/reports

Routing rules:

• inbound sales email -> sales-agent

• build/deploy request -> builder-agent

• outages/security -> ops-agent

• ambiguous/high risk -> orchestrator asks approval

Governance:

• shared policy file for approvals + budgets

• specialist prompts for tone and scope

• escalation summary back to orchestrator
